Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 23 June 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-14, 16-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over 2002/0079106 to Simpson in view of US 6,171,351 to Schröder et al.

Simpson discloses a method for joining two tubulars (shown specifically in Figs 10 A and 10 B , page 5, paragraph 66), which basically comprises a method of locating a portion of a first tubular element 200 within a portion of a second tubular element (Fig. 10A), expanding the portion of the first tubular portion to form a connection resulting from the interference between the two tubular portions (Fig. 10B). In which the external surface of the first tubular element portion is coated with an adherent coating 206 of hard particulates consisting or carbide granules or other commonly used crush resistant hard material. Simpson however fails to explicitly teach the coating process being of plasma spray. Such process however fails to render a patentable distinction over Simpson in that such plasma spraying using mask to form protuberances has been employed for the same purpose in a similar method for connecting two separate tubular element in Schröder et al reference. It would have been obvious to one of the ordinary

skill in the art at the time the invention was made to have used Schröder et al plasma spray method to apply the adherent coating on the first tubular element of Simpson since such would have been a simple matter of engineering expedient.

Allowable Subject Matter

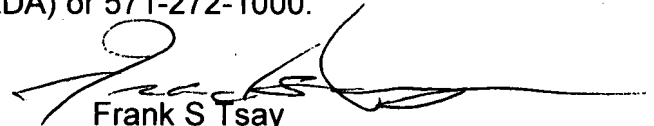

Claim 15 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
